PRODUCT FACT SHEET

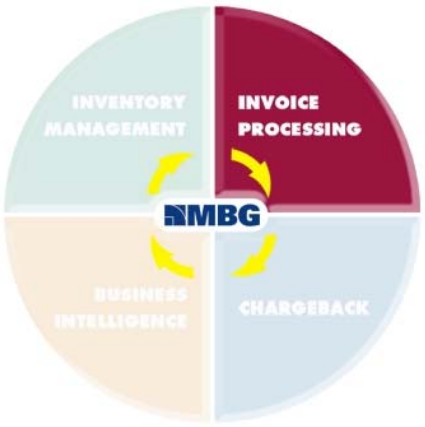
Invoice Presentation

THE BUSINESS CASE

The centralization of telecom invoices is a critical component of a telecom expense management solution. Electronic billing data enables the centralization of invoices and helps organizations view spend as an aggregate or broken down by vendor, service type or location. In addition, electronic data goes beyond the billing detail provided on traditional paper invoices, allowing organizations to drill down to the USOC level. With this level of detail, organizations can identify billing errors quickly and generate an exceptions report to show billing discrepancies. The key to an accurate centralized invoice involves a system that is able to process electronic data feeds that can normalize the data to conduct high impact analysis.

MBG INVOICE PRESENTATION

MBG's Invoice Presentation system is the cornerstone of MBG's suite of telecom expense management solutions. Building upon MBG's unique expertise in processing electronic data and transforming it into valuable information, this invoice presentation tool provides organizations with complete visibility of their telecom spend. In addition, it provides the ability to conduct comprehensive analysis with over 85 standard reports built into the system. Billing data is presented in an easy-to-use interface that allows users to break down spend by vendor, Class of Service/Type, or by defined cost centers within the organization. The goal is to provide organizations with the greatest level of detail to conduct high impact analysis to make intelligent business decisions.



MBG SYSTEMS SUPPORT CORE PROCESSES

HOW MBG INVOICE PRESENTATION WORKS:

MBG accepts vendor data feeds that provide the greatest level of detail, exceeding the information provided on a paper invoice. MBG has already established production systems for most major carriers' electronic billing data. For a new carrier that MBG is not processing data for today, MBG can typically have a production system available in 30-90 days.

MBG has established internal processes to ensure the data is accurate and matches the certified bill or record. Building upon electronic data expertise, MBG accepts corporate data feeds that include human resources data (e.g. Peoplesoft), Provisioning (e.g. Remedy), and General Ledger (GL)/Accounts Payable (AP) feeds (e.g. SAP, PeopleSoft, Oracle, JD Edwards, etc.).

"Give me 10 minutes with MBG and I'll find you $25,000."
— Telecom Analyst, National Healthcare Provider

INVOICE PRESENTATION

"Only 59% of companies know the total cost of network services within their organization"

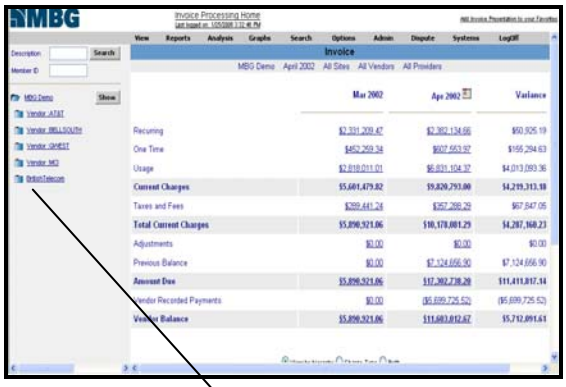
-2007 MBG Benchmark Survey

MBG INVOICE PRESENTATION ADVANTAGES:

- View, analyze, and validate invoice data from multiple carriers in a centralized invoice
- Access over 85 reports, graphs, and data sheets that summarize a wide variety of expense trends and usage data
- Access a complete billed inventory and automatically match data from invoices against internal inventory databases
- Month-to-month comparison reports that identify changes in the invoice, showing additions and deletions
- Exception reports show discrepancies and allow users to dispute the charge with the carrier directly through a Web-based application
- Easy identification of billing errors and tracking of contract terms, enabling efficient negotiation with vendors
- Dispute charges with the carrier directly through the Invoice Presentation application

SAMPLE SCREEN SHOTS*

MULTI-VENDOR VIEW



A user is able to drill into the monthly spend for each vendor. After clicking on a vendor the charges are broken down by service type for each vendor.

MONTHLY SUMMARY: CLASS OF SERVICE ALL VENDORS

By clicking recurring charges, organizations can see a complete listing of every type of charge. From this screen an end-user can then click by Class of Service to view all associated items within a carrier or across multiple carriers.
